

facilities & utilities costs 2024

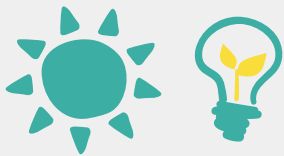

We like to be very clear about exactly what the costs are in our home build projects. While these fluctuate, it is possible to give a general overview. Here's how our facilities & utilities costs currently stand in 2024.

SMOKELESS OVEN

Cost - £160.00

The kitchen is equipped with a smokeless oven that takes three different sized cooking vessels. It is a far superior cooking option, being more fuel efficient and much safer.

SOLAR POWER INSTALLATION

Cost - £315.00

An upgraded solar power installation to provide one power outlet in each room and six light fittings, being one for each room indoors and two external lights at the front & back door.

RAINWATER SYSTEM

Cost - £960.00

This is a significant investment, but one which will be an incredible benefit. Working with the local water utility board we install a 5,000 litre water tank which feeds water to a separate stand tap. A home filter station then allows for clean drinking water, while water direct from the stand tap is used for cooking and cleaning.

FURNITURE

Cost - £575.00

Some basic furniture is provided to make for a more liveable home. We use local carpenters to craft adult & children's beds and a dining table and benches. In addition mattresses and storage trunks for clothing are also provided.

HOUSEHOLD ITEMS

Cost - £270.00

Household items such as: bed sheets, pillows, mosquito nets, cookware, cutlery, plates, cups, padlocks, and some robust new farming tools and seed stock to kick-start food production.

Registered Charity Number 1187525

Total Cost

The facilities costs of our home build projects amount to approximately 20% of the total budget (excluding any land purchase costs where required).

£2,280.00
